Copper Cabling Solutions
## Angled Keystone Patch Panel

Connectix
Cabling Systems

The Connectix 24 Way Unloaded Angled Panel offers enhanced patch lead management in any style of cabinet. The patent pending design naturally sweeps patch leads to the side of the racking, without the panel protruding beyond the rack or cabinet profiles.

Supplied unloaded, the unshielded patch panel accepts Category 6 or Category 5e high performance Keystone Modules, while the shielded version accepts 10G high performance Keystone Modules. These are simply clicked into position. An integrated rear management tray supports the cabling and offers individual cable tie positions.

The 24-way Unshielded Keystone Panel offers a high-density design and the capability for Category 6 data transmission performance levels. Whereas the 24 way Shielded Keystone Panel offers high density and the capability for 10G data transmission performance levels.

For the optimum in on-site installation efficiency, Connectix Express Pre-Terminated and Pre-Tested assemblies can be used.

Product Specifications	
Width	483 mm (19")
Depth	130 mm
Height	44.45 mm
Material	Mild steel
Finish	Fine textured black paint (front) Bright zinc plate (rear)

Ordering Information	
Product Description	Part Number
Cat 6 UTP 24 Way	009-010-010-30
Cat 6a FTP 24 Way	009-010-010-35
